LED LETTERS / CHANNEL LETTERS / SOLID ACRYLIC LETTERS

Channel letters are custom-made metal or plastic letters commonly used in exterior signage on public and commercial buildings, and often internally illuminated. Unlit three dimensional letters that are applied to sign panels or monuments are usually referred to as dimensional letters.

Day and night - channel letters catch the eye of your highly mobile customers as they pass by your locations. This 3D sign element is best for displaying logos, letters and numbers that are easily noticeable and readable. Best suited as architectural signage on your buildings, provides illuminated standard, reverse-lit and open-faced channel letters. Using LED or neon, lighting can be face-lit, back-lit for silhouette effects or front-lit with a halo effect. Whatever lighting technique is selected, your name and logo are prominently displayed to catch the attention of the public.

Make My Signs .in

LED BLOCKOUT DISPLAY SIGNS

Highly applauded for clear visibility, long lastingness and eye-catching patterns, these products are manufactured with the aid of ultra-modern machinery, cutting-edge technologies and latest equipment. Further, before dispatching to the customers' premises, these products are inspected to ensure durability.

BACKLIT SEG FABRIC FOR FRAMELESS LIGHTBOXES

Fabric has become a formidable alternative to traditional printed flex for large backlit signages due to its light diffusion properties. When the edges of the Backlit Fabric graphic are sewn with silicone beading and stretched taut over an edgeless light box frame, the illuminated fabric displays the image with a smooth, frameless look. Printed using our enhanced image resolution process with premium Backlit Fabric allows for dense color, text clarity and contrast that is unmatched in the printing industry.
